

Press Release

Pylones Hellas: A Digital Security Pillar Proud Supporter of Safer Internet Day 2020

Athens, 6 February 2020 – Pylones Hellas is actively involved in the effort for a safer Internet by supporting February 11th, World Safe Internet Day SID 2020, organized by the joint Insafe/INHOPE network of European Safer Internet Centres (SICs), with the support of the European Commission.

Celebrating the positive power of the Internet, this day was established to encourage each of us to participate and make the most of the possibilities that Internet provide us. In this coexistence everyone should play their part right: From **children** and **young people** who can help create a better internet by properly communicating with other users, protecting their online “ego” and social media data, **parents** who play a key role in empowering and supporting children in the safe and positive use of technology in a responsible, respectful and creative way, even to **educators** who can help create a better Internet by transmitting digital literacy skills and developing thinking skills that will allow them to navigate the Internet world better.

But throughout this endeavor, the **industry** must play its part properly as it can help create a better Internet by creating and promoting positive content and secure online services, as well as facilitating users to respond to any difficulties by providing clear solutions on security through easy-to-use tools and quick access to support.

Everyone has a responsibility to make their own positive difference online. For **Pylones Hellas**, the rationale for technological security is a challenge, participating decisively and playing its own crucial role in shaping a better and safer internet.

The company is an active supporter of the academic community on digital security issues. Supporting the national team of young talent, participating in the official European Cyber Security Challenge, organized by the European Network and Information Security Agency (ENISA), helping to promote digital security. The aim of the competition is to disseminate digital security to young people (15-25 years old) in order to encourage them to actively involved in cybersecurity and why not pursue a career in this field.

Security, of course, is not just about our access to the internet and certainly not just about end users. **Businesses** and **organizations** are equally concerned about security, not just their access to the Internet, but primarily their data protection.

Digital transformation, changes in IT infrastructure and the transition to cloud environments are only some of the facts that have made the need for digital security imperative. As a result, one of the most important contemporary challenges concerns the ways in which organizations will achieve the same levels of data protection wherever they are stored.

Pylones Hellas, a provider of advanced ITC security solutions, provides digital solutions and cybersecurity applications that enable businesses to dramatically improve and secure their interaction, both with customers and partners. With its strategic partnerships with leading cybersecurity companies, such as F5 Networks, company provides businesses and organizations with advanced tools that help them stay safe and digitally secure, at all levels.

In Pylones Hellas, **securing a digital world** is not just an issue but a purpose!
